

LeapYears®

CELLULAR HEALTH SYSTEM

Leap Years® is shifting the paradigm of how dogs age.

Developed by the passionate professionals at Animal Bioscience, this two-part cellular health system slows the effects of aging and extends the health and vitality of dogs.

More Life in Your Dog, **More Dog in Your Life**

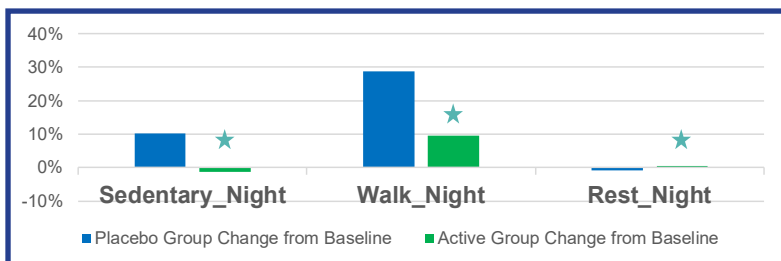

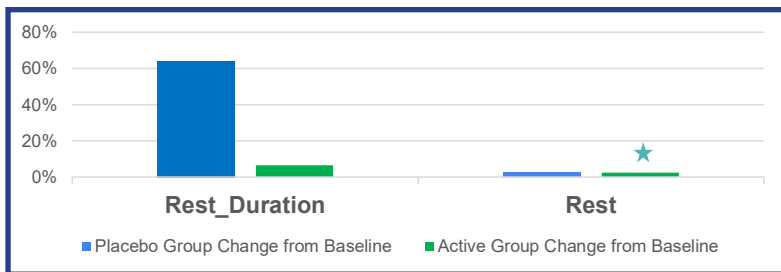

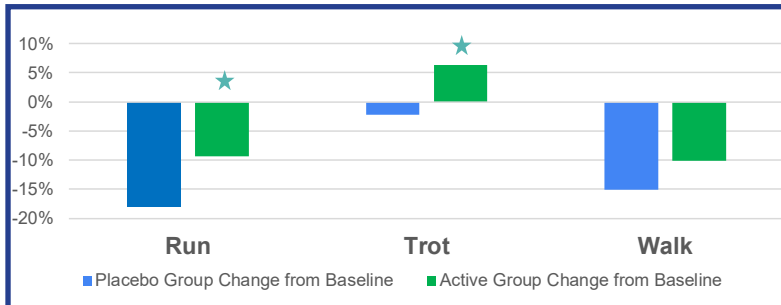

Clinically Proven Benefits

Boosts NAD+, supports healthy cell function and natural clearance of damaged cells.

- Supports vitality
- Improves cognitive function
- Promotes healthy aging

Supporting Veterinary Data

Leap Years® is clinically proven. It is supported by a double-blind, placebo-controlled clinical trial in dogs performed at North Carolina State University College of Veterinary Medicine. Pharmacokinetic and toxicology studies (up to 30X dosage).

Active Group had more daytime energy

During the day, the active group had more trotting than baseline, as they were more active. They also showed less decline in walking and running as both groups acclimatized to the research environment.

Placebo dogs were more lethargic

The placebo group rested for longer periods than active group during the day, even though overall rest time per day stayed the same for the trial duration.

Treated Active Group dogs slept better

The dogs in the active group exhibited deeper rest at night, while the placebo group were restless (sedentary) and paced (walk) more.

★ Indicates significance of <0.05

The Science:

Over time, cells lose their ability to function and replace themselves as they should. This happens throughout a dog's body, leading to disease and the breakdown of different functions, physical and mental. Aging is more than just slowing down or stiffer movement. It can be trouble sleeping, confusion, disorientation, even anxiety.

Leap Years® is a soft chewable, daily supplement system that works at the cellular level in two ways: to restore cellular health by boosting NAD+ production and clean out damaged cells to make room for new, healthy cells.

Leap Years® is based on the science from the laboratory of David A. Sinclair, A.O., Ph.D., Professor in the Department of Genetics and co-Director of the Paul F. Glenn Center for Biology of Aging Research at Harvard Medical School, who is one of the world's leading authorities on aging.

The Value for Veterinary Professionals

For many veterinary professionals, the limited range of options to better manage the signs of aging for dogs is distressing. While veterinary professionals can help manage the signs of aging, Leap Years® is a clinically proven daily supplement that shifts the focus to healthy aging.

- Leap Years® supports vitality, improves brain function, and promotes healthy aging
- In about 3 weeks, owners can see a visible and sustained change in activity and demeanor
- Leap Years® is the only product clinically proven to address physical **and** cognitive signs of aging

Owner Testimonials

He was slowing down, now, he's back to doing zoomies again. Friends ask, "Who's the puppy & where's Kingston?"
Rene (Kinsgton, 10 years old)

"I can't believe it, look at Rosco Go" "Amazing"
Caroline (Rosco, 10 years old)
